Objective

Full-Stack Web Developer with a background in the restaurant industry who has completed extensive coursework and earned certificate at the University of Washington's coding bootcamp and honed skills in the back and front end. Eager to support teams in enhancing the user experience and increasing the bottom line. It is my technical acumen with strong leadership and collaborative skills that make me an advantageous candidate for any team.

Technical Skills

Frontend: HTML5; CSS; JQuery; JavaScript; Bootstrap, Handlebars.js, React.js

Backend: Node.js; MySQL (sequelize); MongoDB (mongoose); Apollo/GraphQL; PHP

Projects

Quiz-Hub | [quiz-hub](#) | Deployed

Created with a team to show off our passion for trivia.

- Allows for a user to register and adds them to database with login for later use.
- A user will be able to take quizzes posted by other users and will be able to create their own quizzes. All user scores can be viewed so other users can compare.
- Social environment to show off what the users know.
- **Tools/Languages:** HTML5; CSS; JavaScript; Handlebars.js; MySQL (sequelize); express

Game-Hub | [game-hub](#) | Deployed

Created with a team to show off our passion for activities and games.

- Allows for a user to register and adds them to database with login for later use.
- A user can search for games they may be interested in and can add games to the database.
- A user can review and rate each game while logged in.
- If a user is not logged in, they can still explore the website.
- **Tools/Languages:** HTML5; CSS; JavaScript; React.js, MongoDB (mongoose), Apollo/GraphQL

Code Quiz | [codeQuiz](#) | Deployed

Created myself to show my JavaScript skills.

- Allows for a user to take a simple code quiz to test their knowledge.
- A user will input their answers by selecting through multiple choice. If an answer is incorrect the timer will decrease. After quiz is done their high score can be recorded within local storage.
- **Tools/Languages:** HTML5; CSS; JavaScript

Weather Dashboard | [weatherDashboard](#) | Deployed

Created myself to make it easy to search for the weather in any given city (within the API).

- Allows for a user to check a cities weather and 5-day forecast.
- A user will input any city that they can think of to check the current weather and the next 5-days weather. They can save their history within local storage.
- Uses API key to call API from openweathermap.
- **Tools/Languages:** HTML5; CSS; JavaScript

Work Experience

Quiznos

08/2018 - currently

Store Manager
Duvall, WA

- Currently overseeing store operations and training incoming staff on best practices.
